EDUCATION

AllenHouse Institute of Technology, Kanpur, UP — Bachelor of Technology, Computer Science | CGPA: 7.2

2023 – 2027

UP Kirana Seva Samiti Vidyalaya, Kanpur, UP — Intermediate (Class XII)

2022

TRAINING & CERTIFICATIONS

- Java Certification — Scaler.com (2025): Object-Oriented Programming, multithreading, collections framework, and core data structures
- Python Certification — Udemy: core language fundamentals, file I/O, REST API integration, and data manipulation with pandas & NumPy
- Data Structures & Algorithms Training — AllenHouse Institute of Technology (2025): algorithm design and complexity analysis across Arrays, Trees, Graphs, and Dynamic Programming

PROJECTS

AI Health & Fitness Planner | Python, Streamlit, GEMINI API, Git.

- Built a modular full-stack **Python/Streamlit** application using **object-oriented design** and **separation of concerns**.
- Developed reusable **BMI, BMR, and TDEE** computation modules with **input validation**, **exception handling**, and unit-testable architecture.
- Integrated the **Google Gemini REST API** to generate dynamic, personalized responses through structured API requests and responses.
- Applied **SOLID principles**, modular architecture, and clean code practices to create a scalable and maintainable codebase.
- Managed the complete development lifecycle using **Git**, **GitHub**, **feature branching**, and version control.

GitHub: [github.com](#)

L7 Load Balancer | Python, AsyncIO, AioHTTP, Docker, Prometheus, Grafana

- Developed a **production-grade Layer 7 HTTP Load Balancer** using **Python**, **AsyncIO**, and **AioHTTP** with a modular, object-oriented architecture.
- Implemented **Round Robin**, **Least Connections**, **Weighted RR**, **IP Hash**, and **Power of Two Choices** algorithms for efficient traffic distribution.
- Engineered **health checks**, **circuit breaker**, **retry mechanism**, **rate limiting**, and **sticky sessions** to improve reliability and fault tolerance.
- Integrated **Prometheus**, **Grafana**, and **REST APIs** for monitoring, observability, and backend management.
- Containerized the application with **Docker Compose** and managed development using **Git/GitHub**, **Pytest**, and feature-branch workflows.

GitHub: [github.com](#)

Twitter Sentiment Analysis | Python, Scikit-learn, NLTK, Streamlit

- Developed an end-to-end Twitter Sentiment Analysis application for real-time sentiment prediction using **Python**, **Scikit-learn**, **NLTK**, and **Streamlit**.
- Implemented and evaluated **Naive Bayes**, **Logistic Regression**, and **Linear SVM** using **TF-IDF** and **Bag-of-Words** feature extraction.
- Trained on the **Sentiment140 dataset (1.6M tweets)** using **3-fold cross-validation**, achieving **79.17% accuracy** with **Logistic Regression + TF-IDF**.
- Built an interactive dashboard with **batch prediction**, **confidence scores**, **model comparison**, **confusion matrix**, and **ROC/PR curves**.
- Designed a modular ML pipeline using **OOP**, **feature engineering**, **unit testing**, and **Git/GitHub** for maintainable development.

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL, JavaScript, HTML/CSS

Data Structures & Algorithms: Arrays, Trees, Graphs, Dynamic Programming, Object-Oriented Design, Algorithm Design, Complexity Analysis

Databases: SQL, MICROSOFT SQL SERVER

Frameworks: React, Node.js, Streamlit

Libraries: pandas, NumPy, Matplotlib, Scikit-learn, Joblib

Developer Tools: Git, GitHub, VS Code, Visual Studio, PyCharm, IntelliJ, Microsoft Excel, Microsoft Word, PowerPoint

Core Computer Science: OOP, Data Structures & Algorithms, Complexity Analysis, Problem Solving, DBMS, Operating Systems, Software Testing, Data Validation

APIs: REST APIs, Google Gemini AI API
